

Get Ticks Off!

Carver County is a high-risk area for tick-related diseases.

What do I need to know?

- Ticks are found in warm, humid areas like tall grasses, brush woods and leaf litter.
- Ticks are most active from March to October.

Why should I be concerned?

- Deer ticks can transmit Lyme disease and other tick-related diseases.
- Early symptoms may include rash, fever, chills, headache, fatigue, muscle and joint pain.
- These diseases are easiest to treat during early stages. See your doctor if a rash or flu-like symptoms develop after a tick bite or outdoor activities.

How can I protect myself?

- Wear light-colored clothing, check for ticks often and remove them right away.
- Use a repellent with 20-30% DEET and wear tick repellent clothing.
- Check your pets daily for ticks. Talk to your veterinarian about tick control products.

Get Ticks Off!

Check for ticks during and after outdoor activities and remove immediately.

Tick Check Zones

Check your entire body, especially these areas:

- Scalp and Ears
 - Underarms
 - Belly Button
- Waist and Back
 - Pelvic Area
- In Between Legs
 - Behind Knees

Tick Removal

- 1) Use a pointy tweezers.
- 2) Grasp tick close to the skin.

- 3) Pull tick out with a slow, steady upward motion.
- 4) Disinfect the bite area.

Tick-related diseases are preventable.
